500 meters of outdoor fiber optic cable

Overview

500M Pre-terminated Fiber Optic Cable Simply plug the cable to any fiber port on the device and high 4 Strands Pre-terminated Fiber Optic Cable 500 MetersS.

Key Takeaways

500 meters of outdoor fiber optic cable is available in single-mode or multimode, armored or non-armored, and can be pre-terminated for plug-and-play installation. Key Options and Specifications

- Pre-terminated Fiber Cables Pre-terminated 500-meter outdoor fiber cables come with LC-LC connectors and protective anti-bend jackets, allowing quick deployment without field termination. They typically support 1G to 10G speeds and are suitable for both indoor and outdoor applications, including overhead or direct burial installations (FASTCABLING) .
- Armored vs. Non-Armored
- Armored cables feature metal or reinforced layers to protect against crushing, rodents, and harsh environmental conditions.
- Non-armored TPU cables are flexible, UV-resistant, and suitable for less demanding outdoor environments (SanSpot) .
- Fiber Type
- Single-mode (OS2): Ideal for long-distance links over 10 km, low attenuation, and high bandwidth.
- Multimode (OM3/OM4): Suitable for shorter distances (under 500 m), easier termination, and high-speed LAN connections (Stanford Optics) .

- Installation Considerations
- Direct burial: Requires armored or water-blocked designs to resist moisture and crushing.
- Aerial installation: UV-resistant jackets and tensile strength are critical.
- Duct or conduit: Abrasion-resistant micro or loose tube cables are preferred for easy replacement or upgrades.
- Bend radius and pulling strength: Ensure the cable can withstand installation stress without signal loss (Owire) .
- Pre-terminated 4-Strand Example A 500-meter pre-terminated 4-strand single-mode LC-LC cable features armored TPU jacket, high tensile strength, water and UV resistance, and is suitable for harsh outdoor environments. It supports plug-and-play connections for multiple high-speed fiber links (FASTCABLING) .
- Bulk Single-Mode Option Bulk 500-foot (≈ 152 m) single-mode cables, such as Corning SMF-28® Ultra, are riser-rated, bend-insensitive, and suitable for long-distance outdoor runs. These can be spliced or terminated on-site for custom lengths (CableWholesale) .

Practical Tips

- Define the application: Determine whether the cable is for building-to-building, campus links, or temporary outdoor deployment.
- Check environmental requirements: UV exposure, moisture, rodents, and temperature extremes affect cable choice.
- Plan for future growth: Higher fiber count or modular designs allow network expansion.
- Verify specifications: Confirm fiber type, jacket material, armor, bend radius, and connector type before purchase.
- Consider pre-terminated vs. bulk: Pre-terminated cables save installation time, while bulk allows custom splicing and routing flexibility. For 500 meters of outdoor fiber optic cable, options are available from suppliers like FASTCABLING, SanSpot, and Amazon, offering both pre-terminated and bulk solutions with armored or TPU jackets, single-mode or multimode fibers, and suitable for direct burial, aerial, or conduit installations .
