

Australian Tubular Busbar Prices

Overview

Aluminium Tubular Busbar | Aliweld Power Aliweld Power offers dependable aluminium busbar systems for Australian projects through our new builds and upgrade.

Key Takeaways

Tubular busbar prices in Australia vary by material, size, and supplier, with aluminium and copper options available from major distributors like Aliweld Power and Voltage Electrical Supplies. Overview of Tubular Busbars in Australia

Tubular busbars are conductive bars, typically made from aluminium or copper, used to distribute electrical current efficiently in substations, switchboards, and industrial installations. Aluminium tubular busbars are popular for their lightweight and cost-effective properties, while copper busbars offer higher conductivity and durability. Busbars are available in various diameters, wall thicknesses, and lengths, and can be customized to meet specific voltage and current requirements.

Suppliers and Product Options

- Aliweld Power: Specializes in aluminium tubular busbars for substations and power transmission. They offer standard and custom sizes, with AS1665-certified welding for structural integrity. Pricing depends on diameter, wall thickness, and fabrication complexity, and quotes are typically provided on request.
- Voltage Electrical Supplies: Offers a range of busbars and terminal connectors, including stainless steel and copper options for industrial and commercial applications. Prices vary by current rating and configuration, such as 250A 8mm 4-point busbars.

- Wescor Electrical: Provides tinned copper busbar kits with pre-drilled holes and mounting plates. Pricing is influenced by bar dimensions and included accessories .
- CNW and 12Volt: Supply copper and aluminium distribution busbars for residential, commercial, and automotive applications, with capacities ranging from 100A to 600A. Prices depend on material, size, and current rating .

Pricing Considerations

While exact prices are not publicly listed, factors affecting cost include:

- Material: Copper is more expensive than aluminium.
- Dimensions: Larger diameters and thicker walls increase cost.
- Current rating: Higher amperage busbars require more material and precision fabrication.
- Customization: Fabricated or pre-drilled busbars with specific lengths or mounting features may incur additional charges.
- Supplier and delivery: Local Australian suppliers may offer faster delivery and compliance with Australian standards, which can affect pricing. For accurate pricing, it is recommended to contact suppliers directly with specifications such as material, diameter, wall thickness, and required current rating. Aliweld Power and Voltage Electrical Supplies provide quotes for both standard and custom tubular busbars .

Summary

Australian tubular busbar prices are highly variable depending on material, size, and customization. Aluminium options are generally more cost-effective, while copper provides superior conductivity. Major suppliers like Aliweld Power, Voltage Electrical Supplies, Wescor Electrical, CNW, and 12Volt can provide tailored quotes based on project requirements . Contacting these suppliers directly is the best way to obtain current and accurate pricing.
