

Color of small busbar heat shrink tubing

Overview

This tubing withstands higher voltages than standard heat-shrink tubing because it's made of a flame-retardant material with excellent electrical insulation properties. It's orange, so it's easy to identify. These tubes become smaller in size as they warmed by hot air or a flame. Most often used as insulation material when connecting wires together, these tubes can be used to group wires together, or insulate items from. WOER's cross-linked polyolefin busbar tube prevents short circuits and electrical leakage while minimizing clearance requirements. Request a quote for reliable electrical protection today! Find tubing with the right shrink ratio, flexibility, and dielectric strength. With the properties of flexibility, excellent mechanical and UV resistance, it is easy to process on straight or bent busbars, providing. HB1 is suitable for the application in busbar insulation up to 3.
