

DML Active Optical Devices

Overview

Lumentum manufactures indium phosphide (InP) directly-modulated lasers (DMLs) in our internal wafer foundry.

Key Takeaways

Directly Modulated Lasers (DMLs) are high-speed, cost-effective optical devices for digital and analog fiber transmission, available from reputable suppliers like Lumentum, Lucentek, and Aluksen.

Directly Modulated Lasers (DMLs) are optical sources where the laser output is modulated directly by the input electrical signal, making them suitable for high-speed optical communication. They are widely used in data centers, telecom networks, 5G wireless, and core optical networks due to their efficiency and compact design. DMLs are particularly effective for short- to medium-reach applications, typically up to 60 km over single-mode fiber, and can also support analog fiber transmission.

Key Features

- High-speed operation: DMLs can support data rates up to 10-800 Gbps depending on the module and driver configuration.
- Wavelength options: Commonly available at 1310 nm and 1550 nm, compatible with standard SMF-28 fiber.
- Integrated components: Many modules include a DFB laser chip, thermoelectric cooler, thermistor, optical isolator, and rear-facet monitor photodiode for precise optical power control.

- **Packaging:** Available in TO packages, SMT, C4, and bare die formats, ensuring flexibility for integration into various optical systems .

- **Applications:** Ideal for high-speed optical fiber communication, microwave photonics, analog transmission, and AI/cloud data center links .

Reputable Suppliers

- **Lumentum:** Offers advanced InP-based DMLs and EMLs for energy-efficient, high-bandwidth optical links in AI and cloud data centers .

- **Lucentek:** Provides 10 GHz DML modules with integrated thermal and optical control, suitable for both digital and analog fiber transmission .

- **Aluksen:** Supplies a wide range of optical modulator drivers and DML drivers supporting up to 800 Gbps, with multiple packaging options for telecom and data center applications .

- **Thorlabs:** Offers active optical devices for manipulating light properties, including DML-compatible components .

Ensuring Genuine Products

To ensure you are purchasing genuine, original DML devices:

- Buy directly from authorized distributors or manufacturer websites such as Lumentum, Lucentek, or Aluksen.

- Verify product specifications against official datasheets, including wavelength, modulation speed, and packaging.

- Check for integrated features like thermoelectric cooling and optical monitoring, which are standard in authentic modules.

- Request certification or traceability from the supplier to confirm authenticity. By sourcing from reputable manufacturers and verifying specifications, you can ensure reliable performance and longevity for your optical communication systems.
