

Installation Solution for Syrian Fiber Optic Endface Electric Cleaning Pen IK10

Overview

AFL Fiber Optic Cleaning Equipment: Keep Your Fiber Op | AFL GlobalAFL offers a complete selection of compact fiber optic cleaning kits for field cleaning.

Key Takeaways

The IK10 Fiber Optic Cleaning Pen is designed for safe, efficient cleaning of connector end-faces using a push-to-clean or solvent-assisted mechanism, ensuring optimal network performance.

The IK10 cleaning pen is an electric or spring-activated fiber optic cleaning tool intended for SC, LC, MPO, and other common connector types. It removes dust, oils, and other contaminants from fiber end-faces without damaging the ferrule or optical surface, which is critical for maintaining low insertion loss and high signal quality .

Installation and Setup

- **Unpack the Pen:** Remove the IK10 pen from its protective case and ensure the tip is clean and free of debris. Many pens come with a dust cap to protect the cleaning thread.
- **Power or Activation:** If the IK10 is electric, insert the required batteries or connect to the power source. For spring-activated pens, ensure the push mechanism moves smoothly.
- **Select Connector Type:** Adjust the pen tip if it supports multiple ferrule sizes (1.25 mm for LC, 2.5 mm for SC/MPO). Some pens have interchangeable tips or adapters .

- **Optional Solvent:** If using a solvent-assisted pen, ensure the fiber optic-grade cleaning fluid is loaded in the pen reservoir. Solvents like non-flammable, residue-free fluids are recommended for stubborn contaminants .

Cleaning Procedure

- **Inspect the Connector:** Use a fiber inspection scope to check the end-face for dust, oil, or scratches.
- **Engage the Pen:** Insert the pen tip into the connector ferrule or adapter. For push-type pens, press the button or push the pen to extend the cleaning thread onto the end-face. For solvent pens, gently press to dispense the cleaning solution while rotating the tip if recommended .
- **Clean the Surface:** Move the pen in a circular or linear motion as specified by the manufacturer to remove contaminants. Avoid excessive pressure to prevent scratching.
- **Inspect Again:** After cleaning, inspect the end-face to ensure all debris is removed. Repeat if necessary.
- **Replace Dust Cap:** Store the pen with the dust cap on to maintain cleanliness.

Maintenance and Best Practices

- **Regular Replacement:** Replace the cleaning thread or tip after a specified number of uses to maintain effectiveness.
- **Use Lint-Free Wipes:** For connectors that cannot be cleaned with the pen alone, use fiber optic-grade wipes with approved solvents .
- **Avoid Alcohol Alone:** Modern fiber cleaning pens often use proprietary solvents more effective than isopropyl alcohol for removing gels and lubricants .
- **Field vs Lab Use:** Electric pens are suitable for field installations, while reel-type or cassette cleaners may be preferred for high-volume lab cleaning . By following these steps, the IK10 Fiber Optic Cleaning Pen ensures clean, reliable fiber connections, reducing signal loss and preventing network downtime .
