

Japanese ADSS 24-core optical cable

Overview

The 24-core ADSS Optical Fiber Cable is a self-supporting solution designed for telecommunications networks. 24 Cores ADSS Fiber Optic Cable ADSS optic cable adopts loose tube layer stranded structure, and the loose tube is filled with water blocking compound. Then, two layers of aramid fibers are twisted bidirectionally for reinforcement, and finally a polyethylene outer sheath or an electric tracking. This specification covers the construction all dielectric self-supporting Optical Fiber Cable (ADSS) properties for outdoor application. Both single mode and multimode fibers can be arranged in ADSS cables with a maximum of 144 fibers. Its ability to be installed without the need for additional support structures makes it ideal for power. AFL-ADSS® (All-Dielectric Self-Supporting) fiber optic cable is a non-metallic cable which supports its own weight without the use of lashing wires or messenger cables.
