

Mauritius Underground Temperature Measurement Optical Cable Company

Overview

Founded in 2011, Electrum is a leader in delivering cutting-edge telecommunication solutions in Mauritius and the region.

Key Takeaways

Photonics Ltd, Electrum, Quasar, and AVR Consulting are key companies in Mauritius offering fiber optic solutions and related equipment suitable for underground temperature monitoring. Local Companies for Optical Cable Solutions

Photonics Ltd specializes in fiber optic last-mile FTTH solutions and copper cable assemblies, providing technical advice on procurement, design, and installation across Mauritius and the Indian Ocean region, which could support underground optical cable deployment for temperature monitoring . Electrum manufactures and supplies fiber optic cables, connectors, and network components for telecom, data centers, and infrastructure projects. Their solutions are scalable, high-performance, and suitable for long-distance data transmission, making them a potential partner for distributed temperature sensing (DTS) systems in underground networks . Quasar Company Limited distributes electrical, test, and measurement equipment, including products from brands like SebaKMT, which are known for cable monitoring and diagnostic tools. They can provide instruments for temperature measurement and monitoring of underground cables . AVR Consulting offers structured cabling solutions and IoT deployments, including low-loss cabling and base station installations. Their expertise in optical fiber and IoT technologies could support the integration of temperature sensors along underground cables.

Technical Context: Optical Fiber Temperature Monitoring

Underground cables, especially medium- and high-voltage power lines, require continuous temperature monitoring to optimize load distribution and prevent overheating. Distributed Temperature Sensing (DTS) systems use optical fibers to provide spatially resolved temperature profiles along the cable length, detecting hotspots and enabling real-time thermal management . While DTS is highly effective, it can be costly for medium-voltage networks. Alternative approaches, such as NTC thermistor-based multi-point sensors, offer a cost-effective and scalable solution for monitoring underground cable temperatures. These systems reduce wiring complexity and allow sequential sensor activation to accurately assess thermal conditions .

Summary

For underground temperature measurement in Mauritius, companies like Photonics Ltd, Electrum, Quasar, and AVR Consulting provide the necessary fiber optic infrastructure, cabling, and monitoring equipment. Depending on the project scale and budget, solutions can range from high-precision DTS systems to economical multi-point thermistor networks, ensuring reliable monitoring of underground electrical or telecom cables .
