

Namibia Fiber Optic Sensor Manufacturer

Overview

ifm stands for the optimisation and solution of technical processes by means of sensors, networking and control systems.

Key Takeaways

There is currently no evidence of a fiber optic sensor manufacturer based in Namibia; the market is served by international manufacturers and local distributors.

In Namibia, companies such as Swanib Cables act as distributors of fiber optic cables and related equipment to sectors like mining, utilities, and telecommunications, but they do not manufacture the sensors themselves. Similarly, DB Space CC and Echo Namibia provide networking, ICT, and fiber optic solutions, focusing on installation, distribution, and managed services rather than original sensor production. The actual manufacturers of fiber optic sensors supplying the Namibian market are international firms, including:

- Opsens Solutions – Offers fiber optic temperature sensors for industrial and geotechnical applications.
- AP Sensing – Provides distributed optical sensing technologies such as DTS (distributed temperature sensing) and DAS (distributed acoustic sensing).
- Optocon – Specializes in fiber optic temperature measurement systems for industrial and power applications.
- PyroScience GmbH – Produces optical pH, oxygen, and temperature sensors for scientific and industrial use.

- Omnisens – Supplies fiber optic-based monitoring solutions for energy industry assets . These companies develop and manufacture the sensors abroad and supply them to Namibia through distributors or local partners. For organizations in Namibia seeking fiber optic sensors, the practical approach is to work with these distributors or integrators who can provide the full range of products, installation support, and technical expertise. In summary, while Namibia has a robust network of distributors and ICT service providers for fiber optic technology, there is no known original manufacturer of fiber optic sensors within the country. Interested parties must rely on international manufacturers and local distribution channels to access these technologies.
