

National Standard for Distribution Box Rails

Overview

DIN rail is a standardized metal rail used for mounting industrial control equipment inside equipment racks and enclosures. Defined by standards such as IEC 60715 and EN 50022, the most common type is the 35mm "Top Hat" rail (TS35). nd efficient operation of the rail infrastructure. They support the overall Network Rail assurance system by specifying how Network Rail controls its principal health and safety risks, and how the organisation complies with National Technical Specification Notices (NSTNs) domestic legislation. This document sets forth technical, installation and safety specifications for distribution boxes, switch boxes and cabinets. It stipulates requirements for enclosure materials, installation dimensions, the mandatory "one equipment, one switch, one RCD" rule, mechanical structure, earthing systems. ns), and allied services and facilities. Please note that it will help save time if you have available your System Number and Company Name. These rails, usually made from steel or aluminum, let you securely snap components like. All engineering recommendations, reports and guidance documents can be found on the ENA Engineering Document Catalogue. ENA documents and specifications are drafted to assist our members in complying with relevant statutory obligations as set out in their Licence Conditions, and in the Distribution.
