

PZ30 Temporary Distribution Box Configuration

Overview

PZ30 technical parameters: PZ30 distribution box use of the environment: 1, the altitude can not exceed 2000m.

Key Takeaways

The PZ30 distribution box is a modular, low-voltage electrical enclosure designed for safe power distribution, supporting single-phase and three-phase circuits up to 100A with IP30 protection.

The PZ30 distribution box serves as a centralized hub for managing and protecting electrical circuits in residential, commercial, and industrial settings. It is suitable for AC 50Hz systems with rated voltages up to 500V and load currents not exceeding 100A, accommodating both single-phase and three-phase circuits for power, lighting, and motor control applications .

Modular Configuration

- **Modular Design:** The PZ30 supports track-based installation of miniature circuit breakers (MCBs), residual current devices (RCDs), and other terminal electrical appliances, allowing flexible expansion and easy maintenance .
- **Busbar System:** Single-phase and three-phase comb busbars are used, with insulation protective covers for enhanced safety and thermal stability .

- Dimensions: Typically, the PZ30 is a 9mm modular unit, allowing multiple modules to be connected for larger installations .

Protection and Safety Features

- Protection Class: IP30, providing dust protection and basic safety against accidental contact .
- Material Strength: Constructed from high-strength steel or stainless steel with flame-retardant and corrosion-resistant properties .
- Thermal Management: Designed for sufficient heat dissipation to prevent overheating during prolonged operation .
- Environmental Tolerance: Operates in ambient temperatures from -25°C to +40°C, relative humidity up to 90%, and altitudes below 2000m .

Circuit and Load Specifications

- Voltage and Frequency: AC 220V/380V, 50Hz (compatible with 60Hz systems in some models), .
- Current Rating: Maximum 100A per circuit, suitable for low-voltage terminal circuits .
- Protection Functions: Overload, short circuit, leakage, and overvoltage protection can be integrated via MCBs and RCDs .
- Entry Points: Knock-off holes on the upper and lower sides allow flexible wiring entry .
- Mounting: Can be wall-mounted or installed in industrial panels, with stainless steel fasteners and silicone rubber seals for durability .
- Applications: Ideal for construction sites, factories, high-rise buildings, outdoor lighting, water treatment, and industrial automation .

Summary

The PZ30 Temporary Distribution Box is a versatile, modular solution for low-voltage power distribution. Its configuration allows for flexible circuit expansion, reliable protection, and safe operation in diverse environments. Proper selection of MCBs, RCDs, and busbar connections ensures compliance with electrical standards and operational safety .
