

Rainproof cover for the plug of the secondary distribution box

Overview

Amazon.com: Weatherproof Electrical Box Cover3 Pack Outdoor Extension Cord Safety Cover, Waterproof, Black | Weatherproof Electrical Box for Plug and Socke.

Key Takeaways

Use IP65–IP68 rated waterproof or weatherproof covers to protect plugs and connections in secondary distribution boxes from rain and environmental exposure.

Types of Rainproof Covers

- **Weatherproof Electrical Box Covers** These covers are designed to seal electrical boxes against rain, snow, and dust. They often include a gasket seal to prevent moisture ingress and are suitable for outdoor switches, outlets, and light fixtures . They can be installed on standard electrical boxes and are available in materials like polycarbonate, ABS, or metal for durability.
- **Waterproof Distribution Boxes** For secondary distribution boxes, consider IP65–IP68 rated enclosures. These boxes provide complete protection against water jets, rain, and dust, and are suitable for outdoor and industrial environments. They often feature DIN rail configurations for modular wiring and can accommodate multiple terminals or plugs . UV-stabilized housings resist sunlight degradation, and compression gaskets maintain sealing even after repeated openings.

- **Weatherproof Outlet Covers** If the plug is exposed, NEMA 3R-rated outlet covers can shield individual plugs from rain and light splashing. These covers include adapter plates for different outlet types and can be expanded to cover multiple devices . They are corrosion-resistant and suitable for outdoor use.

Key Considerations

- **Ingress Protection (IP) Rating:** Choose at least IP65 for rainproof protection; IP66–IP68 offers higher resistance to water jets and temporary submersion .
- **Material:** ABS or polycarbonate housings are lightweight, impact-resistant, and UV-stabilized for outdoor durability .
- **Size and Fit:** Ensure the cover or enclosure fits the plug and allows for cable routing without compromising the seal.
- **Installation:** Some covers are snap-on or hinged, allowing easy access while maintaining waterproofing.
- **Environmental Conditions:** Consider temperature range (–25 °C to +85 °C) and exposure to sunlight or coastal conditions .

Recommendations

- For full protection of a secondary distribution box, a waterproof distribution box with IP65–IP68 rating is ideal.
- For individual plug protection, a weatherproof outlet cover with gasket is sufficient.
- Ensure compatibility with your box type (DIN rail or standard) and confirm that the cover maintains the required IP/NEMA rating after installation. By selecting the appropriate IP-rated enclosure or cover, you can ensure that your secondary distribution box and its plugs remain safe from rain, dust, and environmental hazards, maintaining reliable electrical performance outdoors.
