

Southern Europe has both gigabit and 100 megabit speeds

Overview

Internet speed in Europe Over the last year and a half internet speeds in Europe have increased by more than fifty percent. Unfortunately, the gap between.

Key Takeaways

Southern Europe features a mix of gigabit and 100 Mbps broadband, reflecting both advanced fiber deployment and areas still relying on slower connections. Overview of Broadband in Southern Europe

Southern European countries, including Spain, Italy, France, Greece, and Portugal, have made significant progress toward the EU Digital Decade targets, which aim for 1 Gbps coverage for key socio-economic areas and 100 Mbps for all households by 2025 . While urban centers often enjoy gigabit speeds through fiber-optic networks (FTTP) or DOCSIS 3.1 cable, rural and less densely populated areas may still rely on connections around 100 Mbps, typically delivered via VDSL, cable, or fixed wireless .

Country-Specific Performance

- Spain: Average fixed broadband speeds reach 192.1 Mbps download and 163.2 Mbps upload, with widespread fiber deployment in cities .
- France: Offers 190.6 Mbps download and 156.9 Mbps upload, combining fiber and cable networks .
- Italy: Average speeds are lower, around 92 Mbps, reflecting slower adoption in some regions, though major cities have gigabit-capable networks .

- Greece and Cyprus: Many municipalities have achieved high coverage, with over 85% of areas reaching at least 100 Mbps, but full gigabit coverage is still limited to urban centers .
- Portugal: Strong fiber rollout has enabled speeds exceeding 200 Mbps in urban areas, while rural coverage is improving .

Infrastructure and Disparities

The availability of Very High Capacity Networks (VHCN), which include fiber-optic and advanced cable technologies, is crucial for gigabit speeds. Southern Europe shows large disparities between urban and rural areas, with cities often exceeding 1 Gbps potential, while smaller towns and remote regions may only reach 100 Mbps or less . The gap between top-performing urban areas and rural regions remains a challenge for achieving universal gigabit coverage by 2030.

Trends and Outlook

Internet speeds in Southern Europe have improved significantly over recent years. Average fixed-line download speeds increased by over 50% between 2020 and 2021, and ongoing fiber expansion continues to push more households toward gigabit-capable connections . The EU's Digital Decade policy aims to achieve full gigabit coverage by 2030, which will further reduce the gap between urban and rural areas . In summary, Southern Europe currently offers a dual-speed landscape: urban centers enjoy gigabit broadband, while many households, especially in rural areas, still rely on 100 Mbps connections. Continued investment in fiber and next-generation networks is key to bridging this divide.

Article Content

Internet speed in Europe

Over the last year and a half internet speeds in Europe have increased by more than fifty percent. Unfortunately, the gap between

List of countries by Internet connection speeds

This is a list of countries by Internet connection speed for average and median data transfer rates for Internet access by end-users.

Internet Speeds by Country 2026

For 2021, Monaco claimed the broadband speed title with download speeds of 226.60 Mbps, followed by last year's leader,

Speedtest Global Index - Internet Speed around the world -

Find out which countries have the fastest internet speeds in the world. View global monthly comparisons of fixed and mobile internet

100 Gigabit Ethernet

The decision to include both speeds came from pressure to support the 40 Gbit/s rate for local server applications and the 100 Gbit/s

Network speed comparison in Europe: countries and key data

Network speed comparison in Europe: countries and key data. We analyze not only the average download and upload speeds, but

Where do we stand on the road to a European Gigabit Society?

The countries in which have substantially met the goal of at least 30 Mbps bandwidth nationwide are the Netherlands

A Reality Check on the Progress toward a Gigabit Society

Find out about progress toward EU's Digital Decade strategy, and the gap between advertised speeds and actual

Broadband Connectivity in the Digital Economy and Society Index

The Broadband Coverage in Europe study is designed to monitor the progress of EU Member States towards their specific

Connectivity | Shaping Europe's digital future

Fast, secure and efficient networks are essential for Europe to lead the digital transition. To support growing needs for very fast

What Is Gigabit Ethernet?

When comparing the differences between Fast Ethernet and Gigabit Ethernet, which are both still regularly used

Internet Speed in Europe

When it comes to internet speed, Europe has some of the fastest internet connections in the

Gigabit Infrastructure Act: faster rollout of gigabit-capable ...

The Industry Committee adopted its position on the "Gigabit infrastructure Act", designed to reduce costs and red

Difference between Fast Ethernet and Gigabit Ethernet

It can transfer data at a speed of 100 Mbps while Gigabit Ethernet can transfer data at a speed of 1000 Mbps or 1

Europe's internet speeds are faster than ever, but not for everyone

Over the last year and a half internet speeds in Europe have increased by more than fifty percent. Unfortunately, the

Mapping Gigabit: Where in the World We've Seen Gigabit-speed

Pinpoint where we've seen gigabit-speed internet with interactive maps and insight into which countries and cities have

Fast Ethernet vs. Gigabit: Which network switch should I buy?

For many users, the biggest difference between Fast Ethernet and Gigabit Ethernet comes down to local network

Internet speed is Gigabit but I'm getting under 100

Hello, I've had this one issue now for years now where my internet speed is under 100mbps even though I pay for

Comparing Fast Ethernet and Gigabit Ethernet: A ...

Speed: As discussed in the introduction -Fast Ethernet has a speed of 100 Mbps, whereas Gigabit Ethernet has a

Gigabit Ethernet [Definition, Actual Speed, and Working Theory]

What is Gigabit Ethernet? What is the actual Gigabit Ethernet speed? If you are unclear about them, read this post to

EU Reveals 2025 Gigabit Broadband and 5G Coverage Progress vs UK

The European Commission (EC) recently published their annual 2025 study of broadband coverage in Europe, which reveals how

5G Coverage in Europe: Progress Toward Goals Amid Lingerin

Discover how spectrum policy and strategy shape 5G coverage across Europe, with Nordic and Southern nations

Help With Internet: 100 mbps vs 1 Gig for 2 people?

Im selecting an internet plan for the first time and Im not sure what speed would be good enough for my roommate and I. I would

Is 1Gbps Dead? Meet the Future of Ethernet: 2.5G, 5G, and 10G

In modern homes and offices, the traditional gigabit Ethernet speed of 1Gbps is increasingly becoming a bottleneck.

EU Reveals 2025 Gigabit Broadband and 5G Coverage
