The information provided in this document contains general descriptions, technical characteristics and/or recommendations related to products/solutions. This document is not intended as a substitute for a detailed study or operational and site-specific development or schematic plan. It is a vital part and central hub of any electrical system. The hub distributes electrical power from a single input source to various circuits throughout a building. A feeder usually begins with a feeder breaker at the distribution substation. At this. SUBJECT: Department of the Air Force Guidance Memorandum to DAFI 24-605V2 Air Transportation Operations. Abstract: The design, installation, and protection of wire and cable systems in substations are covered in this guide, with the objective of minimizing cable failures and their consequences.
