

Waterproof Type of Level 3 Distribution Box

Overview

Our distribution boxes are perfect for industrial environments, catering to automation, robotics, and processing facilities.

Key Takeaways

A Waterproof Level 3 Distribution Box typically corresponds to an IP65-rated enclosure, offering protection against dust and water jets for safe outdoor and industrial electrical installations.

A Waterproof Level 3 Distribution Box is designed to protect electrical circuits, terminals, and modules from environmental hazards such as dust, rain, and UV exposure. These boxes are commonly used in industrial, commercial, photovoltaic, and outdoor applications where reliable protection is critical for safety and equipment longevity .

IP Rating and Protection

The "Level 3" waterproof designation generally aligns with IP65 in the IEC 60529 standard:

- First digit (6): Complete protection against dust ingress.

- Second digit (5): Protection against water jets from any direction, preventing damage from rain or cleaning processes . Higher IP ratings, such as IP66 or IP68, offer additional protection against stronger water jets or temporary submersion, but IP65 is sufficient for most outdoor and industrial environments .

Materials and Construction

Level 3 distribution boxes are typically made from durable plastics such as ABS or polycarbonate, providing:

- Mechanical strength to resist impacts and environmental stress
- UV resistance for sun-exposed installations
- Lightweight and corrosion-resistant properties for long-term outdoor use Sealing is maintained with compression gaskets, ensuring the enclosure remains waterproof even after repeated openings .

Applications

These distribution boxes are suitable for:

- Outdoor lighting systems
- Pumps and water treatment equipment
- Solar power installations
- Industrial machinery requiring reliable electrical protection They can be configured with DIN rails for modular wiring setups and are available in single, double, or triple-layer designs to accommodate different circuit requirements .

Selection Tips

When choosing a Level 3 distribution box:

- Assess environmental exposure: Determine if the installation is prone to dust, rain, or chemical fumes.
- Match IP rating to risk: IP65 is standard for Level 3, but consider IP66 or higher for harsher conditions.
- Consider size and layout: Ensure enough space for wiring, terminals, and future expansion.
- Check material quality: UV-stabilized and corrosion-resistant plastics extend service life . By selecting the appropriate Level 3 distribution box, you ensure safe, reliable, and long-lasting protection for your electrical systems in challenging environments.
